Product Warranty (2 Years)

Advantech warrants the original purchaser that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products that have been repaired or altered by persons other than repair personnel authorized by Advantech, or products that have been subject to misuse, abuse, accident, or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced free of charge during the warranty period. For out-of-warranty repairs, customers will be billed according to the cost of replacement materials, service time, and freight. Please consult your dealer for more details.

If you believe your product is defective, follow the steps outlined below.

1. Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages displayed when the problem occurs.
2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
3. If your product is diagnosed as defective, obtain a return merchandise authorization (RMA) number from your dealer. This allows us to process your return more quickly.
4. Carefully pack the defective product, a completed Repair and Replacement Order Card, and a proof of purchase date (such as a photocopy of your sales receipt) into a shippable container. Products returned without a proof of purchase date are not eligible for warranty service.
5. Write the RMA number clearly on the outside of the package and ship the package prepaid to your dealer.

A Message to the Customer

Advantech Customer Services

Each and every Advantech product is built to the most exacting specifications to ensure reliable performance in the harsh and demanding conditions typical of industrial environments. Whether your new Advantech equipment is destined for the laboratory or the factory floor, you can be assured that your product will provide the reliability and ease of operation for which the name Advantech has come to be known. Your satisfaction is our primary concern. Here is a guide to Advantech's customer services. To ensure you get the full benefit of our services, please follow the instructions below carefully.

Technical Support

We want you to get the maximum performance from your products. So if you run into technical difficulties, we are here to help. For the most frequently asked questions, you can easily find answers in your product documentation. These answers are normally a lot more detailed than the ones we can give over the phone.

So please consult this manual first. If you still cannot find the answer, gather all the information or questions that apply to your problem, and with the product close at hand, call your dealer. Our dealers are well trained and ready to give you the support you need to get the most from your Advantech products. In fact, most problems reported are minor and are able to be easily solved over the phone.

In addition, free technical support is available from Advantech engineers every business day. We are always ready to give advice on application requirements or specific information on the installation and operation of any of our products.

Declaration of Conformity

FCC Class B

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for assistance.

Ordering Information

*() Supported by BOM option.

Note! USB power current delivery under S5 Max. 1.8A.

Initial Inspection

Before you begin installing your motherboard, please make sure that the following materials have been shipped:

- 1 x AIMB-289 Intel® Core™ i9/i7/i5/i3 LGA1700 Mini-ITX motherboard
- 1 x SATA HDD cable
- 1-to-2 serial port cables, 20 cm
- 1 x I/O port bracket
- 1 x Warranty Card

If any of these items are missing or damaged, contact your distributor or sales representative immediately. We have carefully inspected the AIMB-289 mechanically and electrically before shipment. It should be free of marks and scratches and in perfect working order upon receipt. As you unpack the AIMB-289, check it for signs of shipping damage. (For example, damaged box, scratches, dents, etc.) If it is damaged or it fails to meet the specifications, notify our service department or your local sales representative immediately. Also notify the carrier. Retain the shipping carton and packing material for inspection by the carrier. After inspection, we will make arrangements to repair or replace the unit.

Chapter 1

General Information

1.1 Introduction

The AIMB-289 motherboard is built around the Intel® H610E PC for industrial applications that require both high-performance computing and enhanced power management. It supports Intel® Core™ i9/i7/i5/i3/Pentium™/Celeron™ desktop processors, supporting up to 20MB SmartCache, and up to 96GB of memory through 2 x DDR5 5600MHz SODIMM slots. The motherboard offers a range of connectivity options, including 4 x serial ports, 1 x USB 3.2 Gen2 type C, 1 x USB 3.2 Gen2, 2 x USB 3.2 Gen1, 3 x 2.5 GbE LAN, 2 x SATA III, 1 x NGFF (M.2 E-Key), 1 x NGFF (M.2 B-Key) connector, and 1 x PCIe x4.

1.2 Features

- **I/O connectivity:** 4 x serial ports, 1 x USB 3.2 Gen2 type C, 1 x USB 3.2 Gen2, 2 x USB 3.2 Gen1, 3 x SATA III, 1 M.2 M-Key & 1 M.2 B-Key, 3 x 2.5GbE LAN, 1 x PCIe x4 Gen3
- **Standard Mini-ITX form factor with industrial features:** The AIMB-289 is a full-featured Mini-ITX motherboard with balanced expandability and performance.
- **Wide selection of storage devices:** SATA HDD, M.2 (B-Key). Customers benefit from the flexibility of using the most suitable storage device for their required capacity.
- **Optimized integrated graphics solution:** With Intel® Iris® Xe Graphics flexibility, it supports versatile display options and a 32 EU 3D graphics engine.

1.3 Specifications

1.3.1 System

- **CPU:** LGA1700 Intel® Core™ i9/i7/i5/i3/Pentium®/Celeron® desktop processor compliant
- **BIOS:** AMI EFI 256 Mbit SPI BIOS
- **System chipset:** Intel® H610E
- **SATA hard disk drive interface:**
 - 2 x SATA connectors with data transmission rates up to 600 MB/s
 - 1 x M.2 B-Key to support PCIe/NVME x2 M.2 2242, 3042

1.3.2 Memory

- **RAM:** 2 x 262-pin SODIMM sockets support dual-channel DDR5 5600MHz SODIMM, up to 96GB Max

1.3.3 Input/Output

- **Serial ports:** Four serial ports; supporting RS-232/422/485
- **USB port:** Supports 4 x USB 3.2 Gen2 and Gen1 with transmission rates of up to 10 Gbps
- **GPIO connector:** 8-bit from Super I/O, general purpose Input/Output

1.3.4 Graphics

- **Controller:** Intel® UHD Graphics 770
- **eDP:** Supports max. resolution 4096 x 2160 @ 60Hz, colay LVDS
- **DP1.4:** Supports max. resolution 4096 x 2160 @ 60 Hz

- **HDMI 2.1a:** Supports max. resolution 4096 x 2160 @ 60 Hz
- **LVDS:** Supports single/dual channel 18-/24-bit with maximum resolution up to 1920 x 1200 @ 60 Hz (LVDS colay with eDP)

1.3.5 Ethernet LAN

- Supports triple 10/100/2500 Mbps Ethernet port(s) via PCI Express x1 bus which provides 500 MB/s data transmission rates.
- **Controller:**
 - GbE LAN1: Intel I226V
 - GbE LAN2: Intel I226V
 - GbE LAN3: Intel I226V

1.3.6 Industrial Features

- **Watchdog timer:** This feature can generate a system reset. The watchdog timer is programmable, with each unit equal to one second or one minute (255 levels).

1.3.7 Mechanical and Environmental Specifications

- **Operating temperature:** 0 ~ 60°C (32 ~ 140°F, depending on CPU)
- **Storage temperature:** -40 ~ 85°C (-40 ~ 185°F)
- **Humidity:** 5 ~ 95% non-condensing
- **Power supply voltage:** 12-24V DC-in
- **Power consumption:** Boost 100.2W; Typical 62.5W (configuration: Intel® Core™ i9-14900 5.4 GHz, 2pcs 48 GB DDR5 5600MHz SODIMM)
- **Board size:** 170 x 170 mm (6.69" x 6.69").
- **Board weight:** 0.365 kg

1.4 Jumpers and Connectors

Connectors on the AIMB-289 motherboard link it to devices such as hard disk drives and a keyboard. In addition, the board has a number of jumpers used to configure the system for your application.

The tables below list the function of each of the board jumpers and connectors. Later sections in this chapter give instructions on setting jumpers. Chapter 2 gives instructions for connecting external devices to your motherboard.

Table 1.1: Connector and Header List

Item	Description	Part Reference
1	Direct Current input connector	DCIN1
2	Display Port / HDMI connector	DP1+HDMI1
3	USB 3.2 Gen1 Connector #2 / #3	USB3_23
4	USB 3.2 Gen2 Connector #1	USB3_1
5	USB 3.2 Gen2 / DP type C Connector	USB-C1
6	RJ-45 Connector #1	LAN1
7	RJ-45 Connector #2	LAN2
8	RJ-45 Connector #3	LAN3
9	HD Audio Interface (Line-Out)	AUDIO1
10	HD Audio Interface (Mic-In)	AUDIO2
11	HD Audio interface (Digital)	SPDIF_OUT1

Table 1.1: Connector and Header List

12	Front panel audio header	FPAUD1
13	Audio amplifier output pin header	AMP1
14	ATX 12V 4 Pin Power Connector	ATX12V1
15	ATX supported 3-pin header on board	ATX_5VSB1
16	Serial ATA interface Connector #1	SATA1
17	Serial ATA interface Connector #2	SATA2
18	Serial ATA interface power connector	SATA_PWR1
19	EDP Connector / LVDS Connector	EDP1_LVDS1
20	EDP / LVDS Backlight Inverter Power Connector	INV1
21	EDP Panel / LVDS Panel Voltage Selection	JEDP1_LVDS1
22	PCI Express x4 slot	PCIEX4_1
23	SPI BIOS Flash Socket	SPI1
24	M.2 E-KEY Connector	M2_E1
25	M.2 B-KEY Connector	M2_B1
26	USB 2.0 Front panel Header	USB2_45
27	USB 2.0 Front panel Header	USB2_67
28	DDR5 SODIMM Socket A1	DIMMA1
29	DDR5 SODIMM Socket B1	DIMMB1
30	COM1 Connector	COM1
31	COM2 Connector	COM2
32	COM3 Connector	COM3
33	COM4 Connector	COM4
34	COM1 RI# selection pin header	JSETCOM1_V1
35	8-bit General Purpose I/O pin header	GPIO1
36	CPU FAN Connector	CPUFAN1
37	System Fan #1 Connector	SYSFAN1
38	CMOS battery Connector	BAT1
39	PWRBTN#/ RESET#/HDD LED/ SM bus	JFP1
40	Power LED pin header	JFP2
41	LED port 80 connector	LED_P80

1.7 Safety Precautions

Warning! *Always completely disconnect the power cord from the chassis whenever you work with the hardware. Do not make connections while the power is on. Sensitive electronic components can be damaged by sudden power surges. Only experienced electronics personnel should open the PC chassis.*

Caution! *Always ground yourself to remove any static charge before touching the motherboard. Modern electronic devices are very sensitive to electrostatic discharges. As a safety precaution, use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis.*

Caution! *The computer is provided with a battery-powered real-time clock circuit. There is a danger of explosion if the battery is incorrectly replaced. Replace only with same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.*

Caution! *There is danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open, or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.*

1.8 Jumper Settings

This section provides instructions on how to configure your motherboard by setting the jumpers. It also includes the motherboard's default settings and your options for each jumper.

1.8.1 How to Set Jumpers

You can configure your motherboard to match the needs of your application by setting the jumpers. A jumper is a metal bridge that closes an electrical circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” (or turn ON) a jumper, you connect the pins with the clip. To “open” (or turn OFF) a jumper, you remove the clip. Sometimes a jumper consists of a set of three pins, labeled 1, 2, and 3. In this case you connect either pins 1 and 2, or 2 and 3. A pair of needle-nose pliers may be useful when setting jumpers.

1.8.2 CMOS Clear (JCMOS1)

The AIMB-289 motherboard contains a jumper that can erase CMOS data and reset the system BIOS information. Normally this jumper should be set with pins 1-2 closed. If you want to reset the CMOS data, set CMOS1 to 2-3 closed for just a few seconds, and then move the jumper back to 1-2 closed. This procedure will reset the CMOS to its default setting.

Table 1.2: JCMOS1

Function	Jumper Setting
Normal (Default)	 <p>1 2 3 1-2</p>
Clear CMOS	 <p>1 2 3 2-3</p>

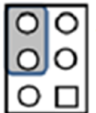

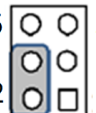

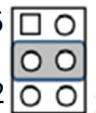

1.8.3 ATX/AT Mode Selection (PSON1)

Table 1.3: ATX/AT Mode Selection (PSON1)

Function	Jumper Setting
ATX Mode (Default) PSON1 (2-3)	 <p>1 2 3</p>
AT Mode PSON (1-2)	 <p>1 2 3</p>

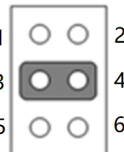

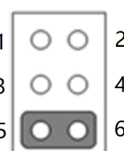

1.8.4 EDP Panel / LVDS Panel Voltage Selection (JEDP1_LVDS1)

Table 1.4: EDP Panel / LVDS Panel Voltage Selection (JEDP1_LVDS1)

Function	Jumper Setting
Jumper position for 3.3V (Default)	 <p>6 5 2 1</p>
Jumper position for 5V	 <p>6 5 2 1</p>
Jumper position for 12V	 <p>6 5 2 1</p>

1.8.5 COM1 RI# Selection Pin Header (JSETCOM1_V1)

Table 1.5: COM1 RI# Selection Pin Header (JSETCOM1_V1)

Function	Jumper Setting
Jumper position for RI# (Default)	
Jumper position for 5V	
Jumper position for 12V	

1.9 System Memory

The AIMB-289 has two sockets for 262-pin DDR5 SODIMM. These sockets use a 1.2 V unbuffered double data rate synchronous DRAM (DDR SDRAM). DRAM is available in capacities of 8GB, 16GB, 32GB, and 48GB. The sockets can take any combination with SODIMMs of any size, giving a total memory size between 8GB, 16GB, 32GB, 48GB and up to a max of 96GB. AIMB-289 does NOT support error checking and correction (ECC).

1.10 Memory Installation Procedures

To install SODIMMs, first make sure the two handles of the SODIMM socket are in the “open” position, i.e., the handles lean outward. Slowly slide the SODIMM module along the plastic guides on both ends of the socket. Then firmly but gently (avoid pushing down too hard) press the SODIMM module well down into the socket, until you hear a click when the two handles have automatically locked the memory module into the correct position of the SODIMM socket. To remove the memory module, just push both handles outward, and the memory module will be ejected by the mechanism.

1.11 Cache Memory

The AIMB-289 supports a CPU with one of the following built-in full-speed last level caches:

36MB for Intel® Core™ i9-14900/ i9-14900T/i9-13900E/i9-13900TE

33MB for Intel® Core™ i7-14700/ i7-14700T

30MB for Intel® Core™ i9-12900E/i9-12900TE 25MB for Intel® Core™ i7-12700E/i7-12700TE

24MB for Intel® Core™ i5-14500/ i5-14500T

20MB for Intel® Core™ i5-14400/ i5-14400T

18MB for Intel® Core™ i5-12500E/i7-12500TE 12MB for Intel® Core™ i3-14100/ i3/ 14100T/i3-12100E/i7-12100TE

6MB Intel® Pentium® Processor 300 / Intel® Processor 300T/G7400E/G7400TE

4MB Intel® Pentium® G6900E/G6900TE

The built-in second-level cache in the processor yields much higher performance than conventional external cache memories.

1.12 Processor Installation

The AIMB-289 is designed to support 12th/13th/14th Gen Intel® Core i9/i7/i5/i3 LGA1700, Pentium®, Celeron® processors.

Chapter 2

Connecting
Peripherals

2.1 Introduction

You can access most of the connectors from the top of the board as it is being installed in the chassis. If you have a number of cards installed or have a packed chassis, you may need to partially remove the card to make all the connections.

Chapter 3

BIOS Operation

3.1 Introduction

With the AMI BIOS Setup program, you can modify BIOS settings and control the special features of your computer. The Setup program uses a number of menus for making changes and turning special features on or off. This chapter describes the basic navigation of the AIMB-289 setup screens.

3.2 BIOS Setup

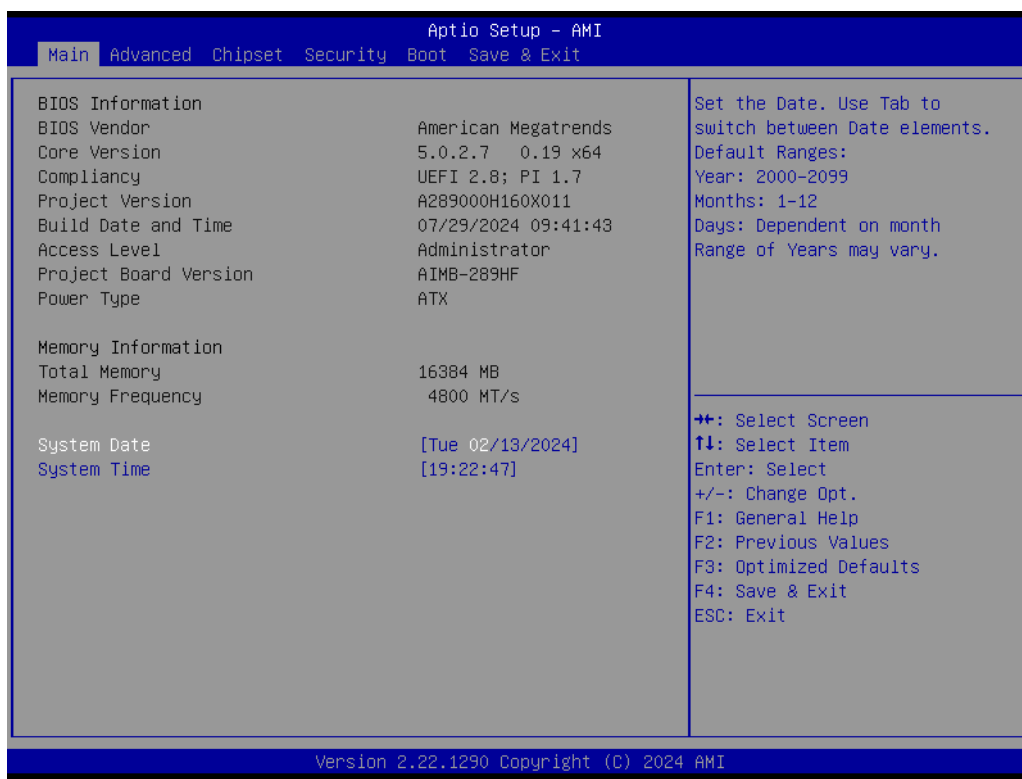

The AIMB-289 Series system has AMI BIOS built in, with a CMOS SETUP utility that allows users to configure required settings or to activate certain system features. The CMOS SETUP saves the configuration in the CMOS RAM of the motherboard. When the power is turned off, the battery on the board supplies the necessary power to preserve the CMOS RAM.

When the power is turned on, press the button during the BIOS POST (Power-On Self Test) to access the CMOS SETUP screen.

Control Keys	
< ↑ > < ↓ > < ← > < → >	Move to select item
<Enter>	Select item
<Esc>	Main Menu - Quit without saving changes to the CMOS Sub-Menu - Exit current page and return to the Main Menu
<Page Up/>	Increase the numeric value or make changes
<Page Down/->	Decrease the numeric value or make changes
<F1>	General help, for Setup Sub-Menu
<F2>	Item help
<F5>	Loads previous values
<F7>	Loads setup defaults
<F10>	Saves all CMOS changes

3.2.1 Main Menu

Press to enter the AMI BIOS CMOS Setup Utility, the Main Menu will appear on the screen. Use the arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

The Main BIOS setup screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured; options in blue can. The right frame displays the key legend.

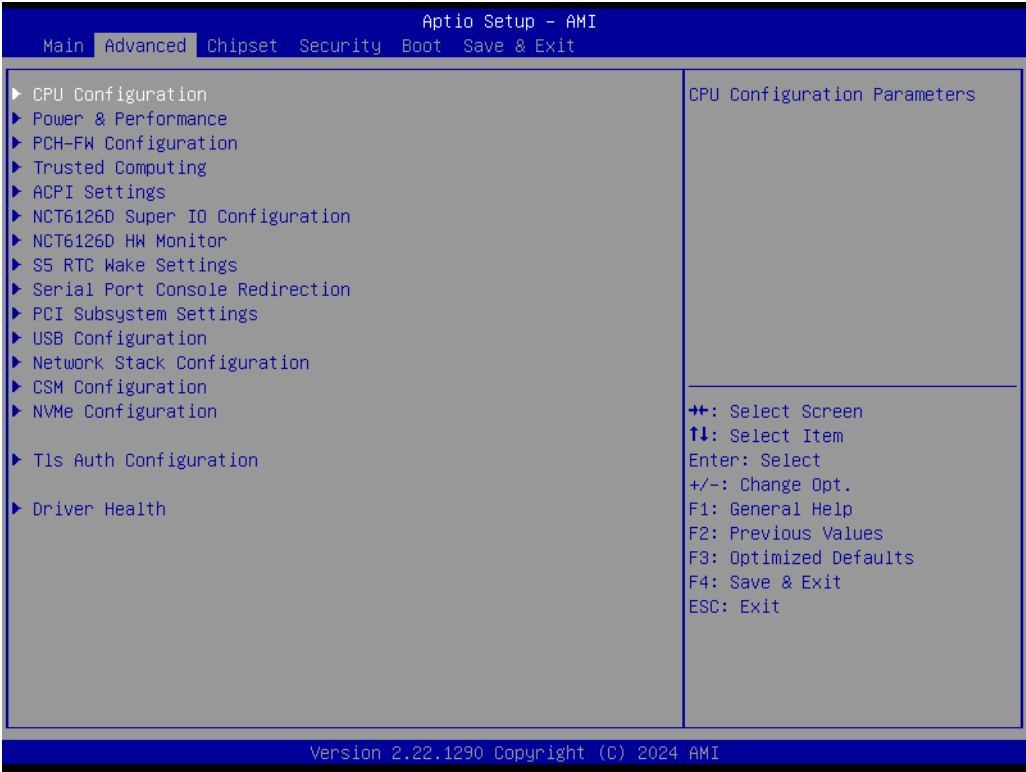

Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it.

■ System Time / System Date

Use this option to change the system time and date. Highlight the System Time or System Date using the <Arrow> keys. Enter new values via the keyboard. Press the <Tab> or <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time must be entered in HH:MM:SS format.

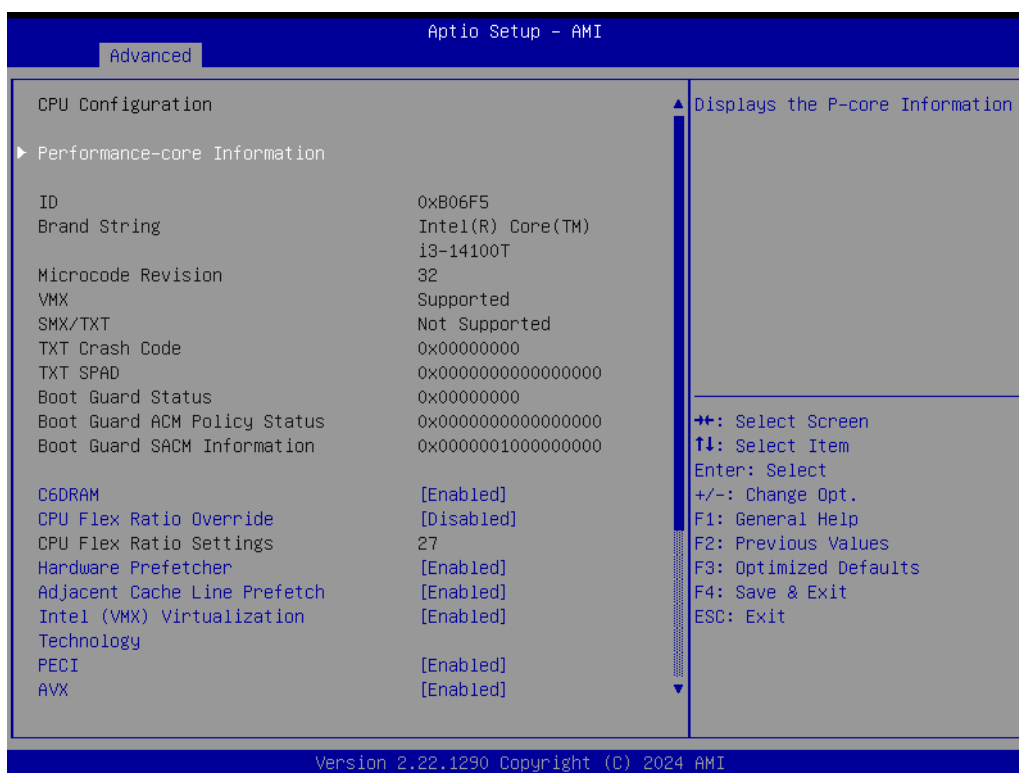

3.2.2 Advanced BIOS Features

Select the Advanced tab from the AIMB-289 setup screen to enter the Advanced BIOS Setup screen. You can select any of the items in the left frame of the screen, such as CPU Configuration, to go to the sub-menu for that item. You can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screen is shown below. The sub-menus are described on the following pages.

Chipset → PCH-I/O Configuration → Security Configuration

HD Audio Subsystem Configuration Settings

Chipset → PCH-I/O Configuration → HD Audio Subsystem Configuration Settings

3.2.4 Security

■ Administrator Password

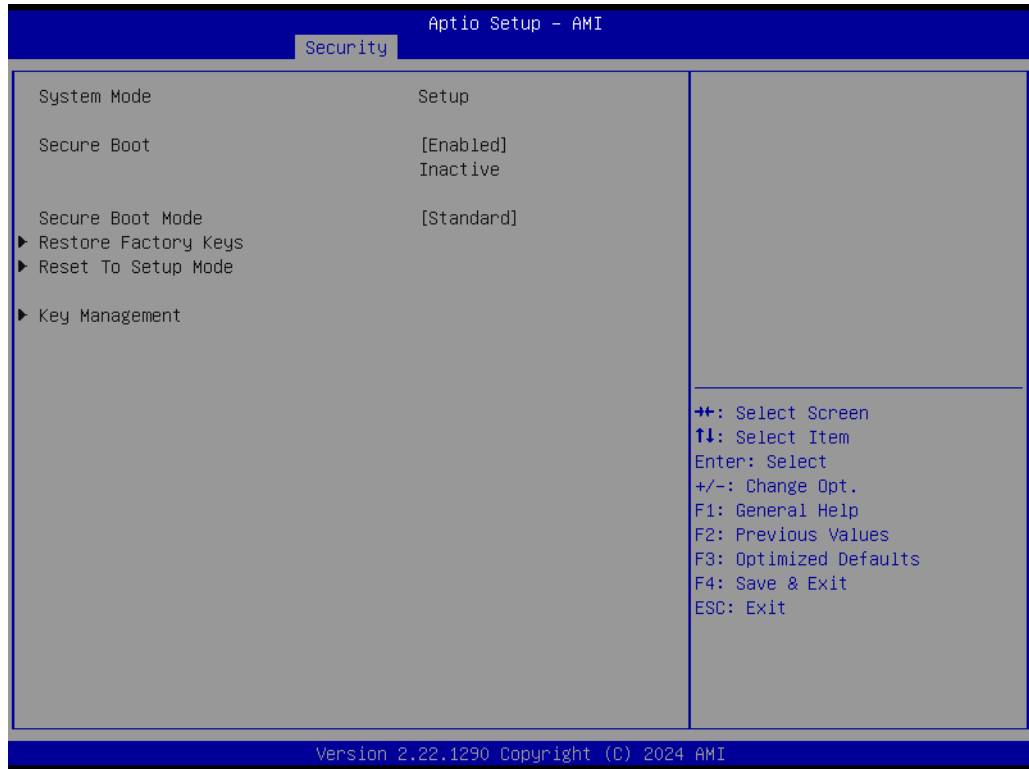

Select this option and press <ENTER> to access the sub-menu, and then type in the password to set the Administrator password.

■ User Password

Select this option and press <ENTER> to access the sub-menu, and then type in the password to set the User Password.

Secure Boot

Security → Secure Boot

3.2.5 Boot Setting

- **Setup Prompt Timeout**
User the <+> and <-> keys to adjust the number of seconds to wait for setup activation key.
- **Bootup NumLock State [Off]**
On or off power on state for the NumLock.

3.2.6 Save & Exit Configuration

■ Save Changes and Exit

When users have completed system configuration, select this option to save changes, exit the BIOS setup menu and reboot the computer to take effect of all system configuration parameters.

1. Select **Save Changes and Exit** from the Save & Exit menu and press <Enter>. The following message will appear: Save Configuration Changes and Exit Now?
2. Select [Ok] or [Cancel]

■ Discard Changes and Exit

Select this option to quit setup without making any permanent changes to the system configuration.

1. Select **Discard Changes and Exit** from the Save & Exit menu and press <Enter>. The following message will appear: Discard Changes and Exit setup now? [Ok] or [Cancel]
2. Select Ok to discard changes and exit.

■ Save Changes and Reset

When users have completed system configuration, select this option to save changes, exit the BIOS setup menu and reboot the computer for changes to take effect.

1. Select **Save Changes and Reset** from the Save & Exit menu and press <Enter>. The following message will appear: Save Configuration Changes and Exit Now? [Ok] or [Cancel]
2. Select [Ok] or [Cancel]

■ Discard Changes and Reset

Select this option to quit Setup without making any permanent changes to the system configuration.

1. Select **Discard Changes and Reset** from the Save & Exit menu and press <Enter>. The following message appears: Discard Changes and exit setup

Now? [Ok] or [Cancel]

2. Select Ok to discard changes and reset.

■ **Restore Default**

The BIOS automatically configures all setup items to optimal settings when users select this option. Defaults are designed for maximum system performance, but may not work best for all computer applications. In particular, do not use the Defaults if the user's computer is experiencing system configuration problems. Select Restore Defaults from the Exit menu and press <Enter>.

■ **Save as User Default**

Save all current settings a user default.

■ **Restore User Default**

Restore all settings to user default values.

■ **Boot Override**

Shows the boot device types on the system.

Chapter 4

Software Introduction
& Services

4.1 Introduction

The mission of Advantech Embedded Software Services is to "Enhance quality of life with Advantech platforms and Microsoft® Windows® embedded technology." We enable Windows® Embedded software products on Advantech platforms to more effectively support the embedded computing community. Customers are freed from the hassle of dealing with multiple vendors (hardware suppliers, system integrators, embedded OS distributors) for projects. Our goal is to make Windows® Embedded Software solutions easily and widely available to the embedded computing community.

4.2 Value-Added Software Services

A software API is an interface that defines the ways by which an application program may request services from libraries and/or operating systems. It provides not only the underlying drivers required but also a rich set of user-friendly, intelligent and integrated interfaces, which speeds development, enhances security and offers add-on value for Advantech platforms. It plays the role of catalyst between developer and solution, and makes Advantech embedded platforms easier and simpler to adopt and operate with customer applications.

4.2.1 Software API

4.2.1.1 Control

GP I/O

General Purpose Input/Output is a flexible parallel interface that allows a variety of custom connections. It allows users to monitor the level of signal input or set the output status to switch on/off the device. Our API also provides Programmable GPIO, which allows developers to dynamically set the GPIO input or output status.

SMBus

SMBus is the System Management Bus defined by Intel Corporation in 1995. It is used in personal computers and servers for low-speed system management communications. The SMBus API allows a developer to interface with an embedded system environment and transfer serial messages using the SMBus protocols, allowing multiple simultaneous device control.

4.2.1.2 Display

Brightness Control

The Brightness Control API allows developers to access embedded devices and easily control brightness.

4.2.1.3 Monitor

Watchdog

A watchdog timer (WDT) is a device that performs a specific operation after a certain period of time if something goes wrong and the system does not recover on its own. A watchdog timer can be programmed to perform a warm boot (restarting the system) after a certain number of seconds.

Hardware Monitor

The Hardware Monitor (HWM) API is a system health supervision API that inspects certain condition indexes, such as fan speed, temperature, and voltage.

Chapter 5

Chipset Software
Installation Utility

5.1 Before you Begin

To facilitate the installation of the enhanced display drivers and utility software, read the instructions in this chapter carefully. The drivers for the AIMB-289 are located on the Advantech support website: <http://support.advantech.com/Support/>. The drivers on the support website will guide and link you to the utilities and drivers under a Windows system. Updates are provided via Service Packs from Microsoft*.

Note! *The driver files on the website are compressed. Do not attempt to install the drivers by copying the files manually. You must download the files and decompress them first. Also, please use the supplied SETUP program to install the drivers.*

Before you begin, it is important to note that most display drivers need to have the relevant software application already installed in the system prior to installing the enhanced display drivers. In addition, many of the installation procedures assume that you are familiar with both the relevant software applications and operating system commands. Review the relevant operating system commands and the pertinent sections of your application software's user manual before performing the installation.

5.2 Introduction

The Intel® Chipset Software Installation (CSI) utility installs the Windows INF files that outline to the operating system how the chipset components will be configured. This is needed for the proper functioning of the following features:

- Core PCI PnP services
- Serial ATA interface support
- USB support
- Identification of Intel® chipset components in the Device Manager

Note! *This utility is used for the following versions of Windows, and it has to be installed **before** installing all the other drivers:*

- Windows 10/11 (64-bit)

Chapter 6

VGA Setup

6.1 Introduction

The 12th/13th/14th Gen Intel® Core™ i processors are embedded with an integrated graphics controller. You need to install the driver to enable the function.

Intel Graphics Flexible is an optimized integrated graphics solution. It supports versatile display options and a 3D graphics engine. Dual independent displays include enhanced display modes for widescreen flat panels for extended, twin, clone, and dual display modes. Optimized 3D support delivers an intensive and realistic visual experience.

6.2 Windows 10/11 Driver Installation

Note! *Before installing this driver, make sure the CSI utility has been installed in your system. See Chapter 5 for information on installing the CSI utility.*

Download the driver from the website to your computer. Navigate to the “AIMB- 289 Technical Downloads” folder and complete the installation of the drivers for Windows 10.

Chapter 7

LAN Configuration

7.1 Introduction

The AIMB-289 has three Gigabit Ethernet LANs (Intel I226V) via dedicated PCI Express x1 lanes that offer bandwidth of up to 500 MB/sec, eliminating the bottleneck of network data flow and incorporating Gigabit Ethernet at 2500 Mbps.

7.2 Features

- Integrated 10/100/1000/2500 Mbps transceiver
- 10/100/1000/2500 Mbps triple-speed MAC
- High-speed RISC core with 24-KB cache
- On-chip voltage regulation
- Wake-on-LAN (WOL) support
- PCI Express x1 host interface

7.3 Installation

Note! *Before installing this driver, make sure the CSI utility has been installed in your system. See Chapter 5 for information on installing the CSI utility.*

The AIMB-289's Intel i226V Gigabit integrated controllers support all major network operating systems. However, the installation procedure varies from system to system. Please find and use the section that provides the driver setup procedure for the OS you are using.

7.4 Windows® 10 Driver Setup (Intel i226)

Download the driver from the support website on your computer and decompress the file. Select "Autorun", then navigate to the directory for your OS.

Note! *Before installing this driver, make sure the CSI utility has been installed in your system. See Chapter 5 for information on installing the CSI utility.*
